
MMA WEEKLY CURRENCIES REPORT FOR THE WEEK OF NOVEMBER 11, 2019

Comments: Please take a moment to view my weekly geocosmic comments on financial markets. Alternatively, you can go to www.mmacycles.com, and then choose Weekly Preview. We are also pleased to announce that these weekly geocosmic comments are now available in [German](#) – [Dutch](#) - [French](#).

GEOCOSMIC CRITICAL REVERSAL DATES

These dates affect all markets. They are the midpoints of geocosmic clusters and have a normal orb of three days either side. Sometimes they expand to as much as five days. The idea is to see a new two-week or greater high or low, and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates. The more stars, the greater the historical correlation with a cycle culmination. For more information, please read Volume 3 of the Stock Market Timing series. Below is the date of the midpoint and in parentheses the length of time containing the geocosmic signatures (known as a “cluster”). If the cluster is long (more than 15 days), there may be other possible reversals, based on tighter geocosmic clusters, within the greater cluster.

Nov 5* (time band starts this week, Oct 27, last thru Nov 14, but especially strong Nov 1-6)

Nov 24 (watch midpoint of this and prior CRD, which is around Nov 14-15)**

Dec 11-12***

These periods are usually more important than the solar/lunar reversal zones, and usually more accurate because they have a wider orb of time (+/- 3 trading days vs +/- 1 trading day for solar/lunars). It is just that when they do hit, they usually correspond with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals.

Note: Mercury is now retrograde, October 31-November 20. We do not advise initiating new position trades during this period, because this period has a high correspondence to fake outs technically and chart-wise with false buy and sell signals. Sometimes markets do run away from us during Mercury retrograde. But often, prices start a new direction only to stop within 1-4 days. Also, any market that doesn't reverse around the time of the retrograde (October 30 +/- 3 trading days) will reverse within 1-2 days of the midpoint to the retrograde Mercury cycle. In this case, the midpoint will be November 9-10.

EUC (Euro Cash - The ETF for longs is FXE): Last week's close was bearish and negates the bullish sequence, which is typical of Mercury retrograde (fake outs). The close was also below the weekly trend indicator point for the 1st time in 5 weeks, which means it is downgraded back to neutral.

This week's trend indicator point is 1.1105. It will be upgraded to a trend run up if it closes above there this week.

Weekly support is 1.0938-1.0964. A weekly close below this range is bearish. A trade below followed by a close back above is a bullish trigger.

Weekly resistance is 1.1098-1.1124. A trade above followed by a close back below is a bearish trigger.

Prices closed below a former bullish crossover zone recently at 1.1489-1.1497, so this is now resistance.

A new bearish crossover zone just formed at 1.1098-1.1114. Others remain in effect at 1.1308-1.1336, 1.3071-1.3101, 1.3332-1.3358, 1.4386-1.4409, and 1.5322-1.5458. These are resistance zones.

This begins the 6th week of a newer 23-27 week primary cycle off the low of October 1 at 1.0877. However, it could still be an older primary cycle starting its 25th week that began with the low of 1.1106 on May 23. As stated last week, *“It seems to be struggling at the 1.1170-1.1180 level for the last three weeks, so it needs to close above there to support my bullish cycle labeling.”* It didn’t do that, so the bearish possibility remains in effect too.

If this is a newer primary cycle, then it is in the price range for a corrective decline, which would be 1.1028 +/- .0036. It fell to 1.1015 late Friday, November 8. If this is an older primary cycle, then the downside price target is 1.0848 +/- .0039 or 1.0807 +/- .0052. The overlap is 1.0808-1.0859.

In either case, an 8-12 major cycle low is not due for another 2-6 weeks. If an older primary cycle, it would also be the primary cycle low, and probably also a 33-month cycle low. On the other hand, any move above 1.1180 indicates this is a newer primary and 33-month cycle and would be very bullish.

As stated last week, *“The daily chart still shows resistance at the downward trendline PB-PB, currently at 1.1280-1.1290. It needs to break above there to give stronger support to the idea that the low of October 1 was a 33-month cycle trough, but even though the pattern looks promising at the moment, we have to consider Mercury retrograde and its tendency to make things look good or not so good, and then flip-flop... Stochastics are a concern right now... Our strategy will be bullish, to buy all corrective declines, that remain above the 1.0877 low of October 1. A corrective decline right now would be back to 1.1028 +/- .0036.”* We are here, but it doesn’t look as promising this week as it did the week before. Typical of Mercury retrograde, what was bullish before is now in doubt, or vice-versa.

Strategy: Position traders are long with a stop-loss on a close below 1.0877.

Aggressive traders are long with a stop-loss on a close below 1.0877. Exit 1/3 at 1.1100 +/- .0025.

Dec Euro (UROZ): Weekly support is 1.0968-1.0992 and resistance is 1.1130-1.1146. The weekly TIP is 1.1140. The difference between cash and September futures is .0031 to futures.

JYC (Dollar/Yen Cash): Last week's close was bullish, negating the prior week's very bearish close (typical Mercury retrograde). And the close was above the weekly trend indicator point after being below it the prior week, which means it remains neutral.

This week's trend indicator point is 108.65. It will remain neutral unless it closes sharply up or down this week.

Weekly support is 108.45-108.60. A close below here will be bearish.

Weekly resistance is 109.77-109.92. A weekly close above this range is bullish. A trade above followed by a close back below is a bearish trigger.

Bullish crossover zones remain in effect at 94.23-94.88, 84.68-84.79, 76.90-76.97, and 76.22-76.25.

Bearish crossover zones remain in effect at 110.70-110.79, 1.1257-1.1264, 122.31-122.46 and 123.40-123.62. It closed above another previously at 1.0443-1.0491, so this acts as support.

This starts the 11th week of the 26-40 week primary cycle off the 104.44 low on August 26, a one-star geocosmic critical reversal date (CRD). That low may have also been a longer-term 33-month cycle trough. It appears that the first 9-14 week major cycle trough occurred the prior week on November 1, the 9th week at 107.87. The market has now soared to a new cycle high at 109.48 on Friday, Nov 7. Since that high exhibited a bearish oscillator divergence signal (new high in price, lower stochastic), there is a chance that the first 9-14 week major cycle is still unfolding, and the crest was last Thursday, which is within three trading days of our Nov 5 one-star critical reversal date (CRD).

On the other hand, the low of Nov 1 was just one day after Mercury turned retrograde, so that could very well be the major cycle low. We are now at the midpoint of Mercury retrograde Nov 9-10, +/- 2 trading days, where reversals can also happen. My bias is that this market will go higher, that Nov 1 was a major cycle low, but with Mercury retrograde, the alternate scenario is also possible (major cycle high now and then a decline to a major cycle low, with a price target of 106.96 +/- .60).

Strategy: Position traders are flat and may stand aside.

Aggressive traders are flat and will look to buy on a decline back to 107 +/- .35 with a stop-loss on a close below 105.75.

Japanese Yen Dec (JYZ): Weekly support is 91.16-91.29. Weekly resistance is 92.29-92.41 The weekly TIP is 92.26.

Euro/Yen Cash: Last week's close was a bullish trigger. And the close was below the weekly trend indicator point for the 1st time in 5 weeks, which means it is downgraded back to neutral.

This week's trend indicator point is 120.72. It will be upgraded back to upgraded to a trend run up if it closes above there this week.

Weekly support is 119.78-119.89. A weekly close below this range is bearish. A trade below followed by a close back above is a bullish trigger.

Weekly resistance is 120.94-121.06. A weekly close above this range is bullish. A trade above followed by a close back below is a bearish trigger.

A bullish crossover zone remains in effect at 117.92-118.15. It closed below another bullish crossover zone previously at **127.27-127.60**. This is now resistance zones.

A bearish crossover zones remain in effect at **127.56-127.67**. Prices broke above other bearish crossover zones recently at 119.96-120.25 (that held the low) and 116.61-116.91 recently, and these are now support.

This starts the 10th week of the 23-37 week primary cycle off the low of September 3, at 115.84. As stated last week, *"It looks like the market made a double top at 121.46 on Wednesday, October 30 and October 21, and is now beginning a corrective decline to its 8-12 week major cycle trough... If the crest is in, then the price target for a corrective decline to an 8-12 week major cycle low would be 118.65 +/- .66."* That 23-day moving average is now at 120.43 and rising, and price have touched that area, so the minimum criteria is filled with last week's low of 120.12. But stochastics are pointed straight down, so prices could fall lower, perhaps into our Nov 24 two-star CRD zone, +/- 3 trading days.

Strategy: Position traders are long with a stop-loss on a close below 117.10 after taking a nice profit on 1/3 of the trade so far.

Aggressive traders are long with a stop-loss on a close below 117.10 after taking a nice profit on 2/3 so far. Look to buy those positions back if prices decline to 118.65 +/- .35.

Swiss Franc Dec (SFZ): Last week's close was bearish. The close was also below the weekly trend indicator point after being above it the prior week, which means it remains neutral.

This week's trend indicator point (TIP) is 1.0119. It will remain neutral unless it is sharply up or down this week.

Weekly support is .9983-1.0003. A close below is bearish. A trade below followed by a close back above is a bullish trigger.

Weekly resistance is 1.0115-1.0136. A trade above followed by a close back below is a bearish trigger.

Prices closed below a bullish crossover zone that had formed recently at 1.0517-1.0538 in the nearby contract, so this is also a resistance zone.

A new bearish crossover zone just formed at 1.0115-1.0117. Others remain in effect at 1.0215-1.0216 and 1.0416-1.0426 in the nearby contract. It closed above another previously at 9977-1.0002. This is a support zone.

I think this starts either the 27th week of an older 23-37 week primary cycle off the low of .9901 on May 7 in the Sep contract, although it could also be the 6th week of a newer one off a distorted primary

cycle that may have formed at 1.0029 on Oct 3. The 1.0029 mark is key support now to determining the correct labeling of this primary cycle, and it is being tested now with the bearish close and new bearish crossover zone at 1.0115-1.0117. It needs to close back above there before falling below 1.0029 to support the idea of a newer and bullish primary cycle. It doesn't look good, but this is Mercury retrograde where surprises and fake outs are more the norm than the exception.

However, also keep in mind that if the Swiss Franc does break below 1.0029 and the Euro cash holds above 1.0877, it could be a case of intermarket bullish divergence, and it is late in the Swiss Franc primary cycle when primary bottoms can happen.

Strategy: Position traders are long with a stop-loss on close below 1.0029 if the Euro also makes a new cycle low below 1.0877.

Aggressive traders are long with a stop-loss on close below 1.0029 if the Euro also makes a new cycle low below 1.0877.

EVENTS

January 12, 2020: The Saturn/Pluto Conference: "Reset Astrology: Start of a New Era," Zurich, Switzerland, featuring Claude Weiss, Monica Kissling, Verna Bachmann, Alexandra Klinghammer, Klemens Ludwig, Markus Jehle, Dr. Christof Niederwieser, and Raymond Merriman. For more information, visit <https://www.astro2020.ch>.

February 8, 2020: MMA'S FORECAST 2019 LIVE WEBINAR will take place on Saturday, February 8, 2020. In the comfort of your own home or office, you can tune into Raymond Merriman's annual worldwide [Forecast 2020 Webinar](#). This broadcast will address subjects from next year's [Forecast 2020 Book](#), with updates on financial markets since the book was written in November 2019. Outlooks for the U.S. stock market, Gold and Silver, crude oil, and currencies will be discussed. **Cost is \$55.00** and includes the slides of the presentation, plus a downloadable video recording of the event. If unable to attend live, you can still sign up, as everyone who orders the Webinar will receive the slides and video recording, following the live event.

September 9-14, 2020: The ISAR 2020 Conference on "Reimagining the Future." The largest and most exciting international astrological conference taking place in 2020. With a faculty of over 100 of the world's top astrologers from 25 different countries, and very dynamic tracks on Financial Astrology, Mundane and Political Astrology, and other topics, this is an event you will not want to miss. **On Wednesday, September 9, Ray Merriman will be conducting a 4-hour workshop on Astrology and the art of financial market timing: How to forecast trends and market reversals.** This course will provide research studies showing the correlation of astrological factors to short-term and longer-term financial market timing in stock markets, precious metals, and Bitcoin. To register or see more information on this spectacular event, go to go to <https://isar2020.org> and be prepared to be amazed!

Disclaimer and using this information properly: MMA comments and trade recommendations are primarily for traders of commodity and futures contracts. There is no guarantee as to future accuracy or profitability. Each trader and reader trades at his or her own risk, and neither the author nor publisher assume any responsibility whatsoever for anyone's financial or commodity markets decisions. Futures or options trading are considered high risk.

These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take risk of loss." Speculators must be willing to accept the fact that they are going to have losing trades, many more than say "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by high percentage of winning trades, but by controlling amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades. MMA's comments can be of value to both speculators and investors. MMA's trade recommendations will be of potential value only to speculators.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above, it is considered a bullish “trigger”, and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below, it is considered a bearish “trigger, and oftentimes a good sell signal.
